

# SIK + SP = a perfect match!

On 1 January 2015, SIK – the Swedish Institute for Food and Biotechnology, became a unit, **SP Food and Bioscience**, within the SP Group. The aim was to create a uniform organisation with integrated and stronger expertise within the field of food.

## **A stronger and more complete partner**

Through the coordination of our resources within the field of food, we will be able to offer both a broader and a wider range of services. Our ability to drive major research and development projects will be further strengthened. We will also gain the opportunity to develop the SP Group's expertise within food in a much better way in the future, which will of course benefit everyone who hires or works with us.

## **Receive help from 100 experts – or 1,400**

The new unit have approximately 100 employees, of which approximately one third are educated to research level. The balance between services, innovation and research will be good, with an emphasis on the first two areas. This will give us excellent opportunities to help you and your company throughout the innovation process, from idea to market-ready product. And you may well already know that there are a total of 1,400 people within the SP Group with expertise within everything from Energy, Life Science and Transport to Risk and Safety, Social Structure and Information and Communication Technology?

*SP is an internationally leading institute group. We create value in cooperation and offer quality throughout the innovation chain, which is very important for industrial competitiveness and sustainable development.*

## **SP Technical Research Institute of Sweden**
